

Managed Security

Every business, no matter the size or industry, needs to consider the impact of a cybersecurity breach — and be ready for it. If your customers' data got stolen, what would you do? When it comes to cybersecurity, an ounce of prevention is worth a pound of cure. While there is no silver bullet, it pays to be prepared. You can either go it “alone” or work with a managed services provider, like TPx, to help you prepare. Managing it in-house can be more expensive and painful since cybersecurity talent is scarce.

Unlike many smaller MSPs, TPx has a broad IT and cybersecurity portfolio, including security advisory services, security assessments, ransomware protection, user security, endpoints, firewalls, backups, managed detection and response and much more. Our services leverage technology from known leaders in the industry, including Fortinet, Kaseya, GoSecure and more. As a nationwide provider with thousands of customers, we have helped thousands of businesses with IT and security over the last 25 years. We offer various service levels to ensure you get as much or as little handholding as you need. We act as an extension of your team and are here to assist you 24/7/365.

“We get what we pay for and more with TPx’s comprehensive cybersecurity expertise. We consider them a long-term partner.”

Jaz Jackson, Executive Administrator, Grower's Secret

TPx Security Solutions

Solution	Description
Cloud-to-Cloud Backup	One-click restore for Microsoft 365 (Exchange, OneDrive, SharePoint, Groups, and Teams)
DNS Protection	Safeguard any device that accesses the Internet by blocking known malicious threats
Endpoint Management & Security	Protecting endpoints with patch management, next-gen antivirus, RMM, MDR & more
Firewall	Next-gen firewall with UTM (unified threat management), VPN, MDR
FTC Safeguards Advisory Services	TPx creates, owns and maintains security program per FTC Safeguards requirements
Gap Assessment	Evaluate company's security posture, compare it against industry standards and best practices
Hybrid Backup	On-premises Datto backup with replication to secure cloud
Inbox Detection & Response	Microsoft 365 plug in to enable users to validate emails' authenticity with one click
Incident Response Plan	Create a plan outlining how an organization would respond to and manage cybersecurity incidents
Network Security Assessment	Evaluate your organization's network security posture and profile
Penetration Scan	Shows how exploiting a vulnerability could result in a significant impact on the environment
Ransomware Assessment	In-depth review of company's readiness in responding to a ransomware attack
Security Awareness Training*	Regular training courses with phishing simulations, following NIST guidelines
Vulnerability Scan	Evaluate devices connected to the network to identify vulnerabilities present due to open ports, missing patches, etc.
Wireless Security Assessment	Evaluate your org's wireless infrastructure and configuration, security posture, and functional capabilities

Don't see what you are looking for on the list? Let us know. We are often able to customize our offerings to fit your unique needs.

No-Cost Starter Options

Solution	Description
Network Security Evaluation (also known as CTAP)	Fast and free assessment to identify security risks and network usage
Ransomware Evaluation	Free 30-minute session with our security SME, with a high level output of areas in need of an attention
Security Awareness Townhall	Free 30-minute virtual session to educate staff on best cyber hygiene practices

It doesn't have to be costly. Get started with our no-cost offers. Nothing to lose, only to gain!

“You don't have to be good to start... you just have to start to be good!”

Joe Sabah

Combating Common Myths

Cybersecurity Is Essential for Businesses of All Sizes

If you think your company is too small to be targeted, think again. Nearly half (43%) of all cyberattacks are against smaller organizations.

** CyberCatch research*

Cybersecurity Is Not Just Technology

Successful cybersecurity protection is a three-pronged approach that leverages people, processes and technology.

Cybersecurity Is an Investment, Not a Cost

75% of SMBs would not survive a ransomware attack.* Effective cybersecurity is an investment in your business because it supports continuous operations and boosts customer trust.

Cybersecurity Is Affordable for SMBs

Managed security (a.k.a. security-as-a-service) enables SMBs to source cybersecurity delivered by experts as an affordable monthly subscription.

Cybersecurity Services Aren't Created Equally

Choose a provider with both breadth and depth in security expertise and technologies to deliver the service levels you require.

Why TPx?

Comprehensive portfolio of managed IT services

Solutions for the biggest IT issues — cybersecurity, connectivity, and collaboration.

150+ certs across 60+ competencies, such as CompTIA, Cisco, Fortinet, Microsoft, SMC

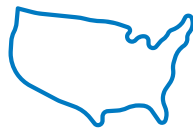

HIPAA, PCI-DSS, and SOC 2 compliant solutions
